

## Utility Bucket

Utility Bucket - Universal Fit buckets also go by the name "slip-on-the-forks" forklift attachment buckets. These buckets could be utilized together with whichever make and model of extendable reach forklift. If your unit can't be matched with a quick-tach component, another new or used universal fit bucket could be located instead. Standard universal lift truck buckets attach to forks which are up to 6" wide and are 48" long. Larger fork pockets can be ordered through an account executive upon request.

For the reason that they slip directly onto the blades, universal fit buckets stay on the equipment and are less susceptible to destruction. Compared to the quick-tach bucket models, universal fit buckets are 50% deeper. This additional space makes them ideal for carrying irregular shaped loads like for example elevating roof gravel, moving large debris piles, broken up concrete, backfilling behind walls and tearing off roof trash.

### Quick-Tach Buckets

Quick-Tach Buckets are constructed for extendable-reach forklifts. They are built to allow placement of material way beyond the reach of a loader. A hardened beveled cutting blade on both sides and on the leading edge reinforces stability, resistance to damage and provides supreme durability. Quick-Tach forklift buckets are reinforced by scuff bars along the bottom of the unit that shield it from abrasion.

Quick-Tach lift buckets can in various cases substitute the forks and carriage of a lift truck, that may weigh anywhere between 100-700lbs. These buckets when set up could free up more load capacity, enabling it to deal with both larger and heavier things. The Quick-Tach can pour materials around 1.5 feet higher due to the shorter depth of its bucket. These buckets are fabricated in a custom fashion so as to suit the specifications of particular makes and models of lift trucks. It is important to check with a construction equipment specialist in order to find the customized Quick-Tach bucket solution for all your needs.

Forklift bucket accessories are great for construction work on the ground level. They could be used to move snow in the northern parts, gravel and even sand. Clean-up on the job location could be even be accomplished using a lift truck bucket. The many uses the bucket can complete saves the company a lot of time and money as it does have to absolutely switch tools or equipment and this could help prevent running into overtime.
